Profile

I'm a passionate and experienced web developer.

I love my job, love what I do, that's my life, that's what I was born for I think.

That's so lovely that I can create things for people making their lives easier and better!

Employment History

Senior Frontend Developer, Dostavista, Moscow

AUGUST 2017

Dostavista is a one day delivery startup with offices around the globe.

Here I support the front-end part of the company websites, order processing and client cabinet.

Main technologies we use are TypeScript with React (and Redux) (plus CSS modules), PHP and Node.JS.

We also use the things such unit testing, visual tests, code review and CI/CD process on GitHub to ensure a stability and predictability of our code.

Full-stack Developer, AGRO24, Moscow

AUGUST 2017 – AUGUST 2018

AGRO24 is a Moscow based startup which connects grocery stores and chains with farmers.

The system was a single page application written on Vue.JS and Laravel. It also had an administration part which was used to control the system.

I was a full-stack engineer there and created a whole modules (pieces) for the app.

I created modules for a billing system (such as money transfer and withdrawing), order placement and editing page and another different things.

Lead web developer, Flower-shop.ru, Moscow

APRIL 2011 – JULY 2017

This project is a self-written huge eCommerce\CRM system for one of the biggest Moscow internet flower shops.

The system was written many years ago and is still being developed.

There were thousands of PHP, JS and CSS files and smarty templates. The project had a database with more than 50 GB of data.

I optimised a page generation speed, database queries, google page speed rank, client-side assets (scripts post load, minification and more) and so on.

I also lead a small developer's team includes one web developer and one HTML\CSS coder.

There were a lot of modules I have created. For example:

- Internal version system - it's written with PHP and stores all modification of goods, sections, different dictionaries and more.
- Modified and supported online bar-code system.
- Created and supported control warehouse system
- Created and supported control work time for employees
- Created and supported the mobile version for the website
- Created new order form
- Created a e-mail delivery system, based on templates and integrated with goods.

Hobbies

Driving a car, walking with my dogs, watching movies and TV shows in English

- Created a system which checked a company's Instagram account, parsed data and sent photos to customers.

Because I worked there for a long time, I touched almost every file and module in this huge project.

Web developer, WishPro, Moscow

JUNE 2010 – JULY 2011

I made several projects for company's clients. We used my content management system Scripto CMS to build our projects.

It was the projects like e-commerce websites, portfolios, brand pages and so on.

A little bit more about my programming experience

Here I wanted to describe my experience on the whole.

I was always very interested in computers and technologies. I started programming in 2002 when I went to the college.

During my career, I have developed my own content management system (PHP), few mobile applications (React Native), link catalogue (PHP) and few NPM packages.

I also worked with a variety of frameworks (the favourite one is Laravel), CMS (WordPress, Bitrix etc), numerous API's (Facebook, Instagram, Vkontakte, Twitter, different Google services such as AdMob, Analytics, TagManager, Maps), Yandex (Maps, Money, Metrika).

I used different template engines with Node.JS, PHP, worked with many different libraries in packages in both PHP and JS. I integrated payment systems such as: Qiwi, PayOnline and so on.

Independent React Native developer

In my free time, I love to experiment with new technologies.

And one of my passions is mobile development with React Native.

My latest application is called Worder.

It's an app for learning English words. It has a backend part written with Nest.JS and a client - React Native application.

I released it for both App Store and Play Store.

Here're the links:

<https://apps.apple.com/us/app/worder-vocabulary-builder-app/id1596878299>

<https://play.google.com/store/apps/details?id=com.learn.english.words.app>

During my career, I also create other mobile applications.

Freelance

JUNE 2002 – JUNE 2010

I was a freelancer from 2002 till approximately 2011 year. I was a student back then and freelancing fit me very well, I loved it.

It was a big part of my developer's life. The time when I launched quite a few projects.

There were the projects which I developed for myself and the clients' projects where my developments were used.

The first one was Scripto Catalog and the second one was my dream at that time - Content Management System.

I always wanted to create my own CMS and I did it!

It was called Scripto CMS, I launched with my CMS approximately 100 projects (which I made myself).

Scripto Catalog was installed more than 3 000 times. At those times, Scripto Catalog was one of the leading software catalog products in Russia.

I also worked with different designers which made design layouts for me and my clients. Some layouts I also made by myself.

After a few years of working, I was invited to the company WishPro in a full-time position.
